

**ACRYLIC DESIGN UK LTD.**

## **Environmental Considerations**

### **Recycling**

Most products can now be recycled

Acrylic Design collects and separates all plastic materials and ensures they are in a clean condition and not contaminated with coatings such as inks, adhesives or grease.

### **Degradability**

Some materials break down in the soil or when exposed to sunlight. Most cotton and paper will fall into this category. Plastics on the whole don't. Some plastics claim to be but must pass EN 13432 to qualify. Always check where possible.

All Acrylics can be recycled

### **Recycled Content**

Our packing materials can all be recycled and used to repack products and or recycled further to ensure the minimum amount is sent to landfill.

All Cardboard can be sent to land fill as it is degradable

### **Use of Plastics**

Oil and Gas are finite resources which need to be conserved. Both are used when creating plastics. Products which use a lower proportion in their composition compared to the plastics they replace are a good way of extending the resources we have left.
